Note(1). Leakage Current : DC rated voltage shall be applied between anode and cathode lead wire terminations of a capacitor through 1k protective resistance, and the leakage current shall be less than or equal to the value listed in above table after 2 minutes with the voltage reaching the rated value at  $20\pm2^\circ\text{C}$ .

If the value is doubtful, measure the leakage current after performing voltage treatment which shall contain the following steps:

Voltage treatment: (1) DC rated voltage is applied to the capacitors for 60 minutes at  $105^\circ\text{C}$ . (2) Cooled down to room temperature with applying voltage. (3) Discharged through a resistor of approximately  $1\Omega/\text{V}$ .
