## ■ NOTE

### 1. Storage condition:

To maintain the solderability of terminal electrodes:

- 1.1. Temperature and humidity conditions: 5~35°C and 35~70%RH.
- 1.2. Storage life: 12 months Max. If product is preserved for more than 1 year, the solderability of their terminals may be deteriorated.
- 1.3. The packaging material should be kept where no chlorine or corrosive gas environment. (example: salt, sulfur, acid, etc ..)

### 2. Transportation

- 2.1. Products should be handled with care to avoid damage or contamination from perspiration and skin oils.
- 2.2. The use of tweezers or vacuum pick up is strongly recommended for individual components.
- 2.3. Bulk handling should ensure that abrasion and mechanical shock are minimized.
